

## **b&m-Quick Release Fastener**

Customizable fastener for items that require frequent opening and closing

# Innovative Fastening Technology

The globally operating b&m-group has established a strong position in **fastener technology** and **C-part management** within the Automotive industry. This position is based on our vast array of innovative products, processes, systems and trust generated through competency, commitment and reliability.

## b&m-Quick Release Fastener

The b&m-Quick Release Fastener has been specially developed for frequent opening and closing of control cabinets. Due to its unique geometry, it is possible to realize release and closing mechanisms with a quarter turn. Thus, maintenance and control work can be carried out quickly and efficiently and without long disassembly.

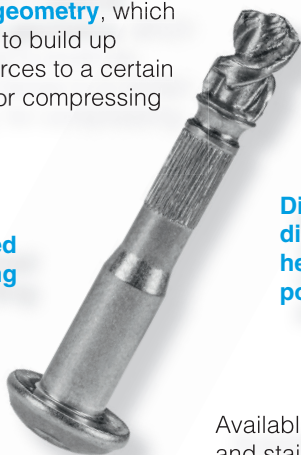

## Features

The b&m-Quick Release Fastener has a **special steep helix geometry**, which can be used to build up pretension forces to a certain extent, e.g. for compressing a gasket

**Now produced by form rolling**

**Special locking lug** secures the connection against automatic loosening

**Different lengths, diameters and head geometry possible**

Available in steel and stainless steel

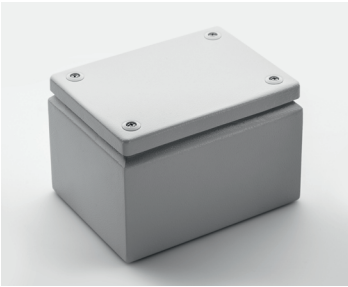

## Typical Applications

Typically used for fixing removable and easy access panels, frames and covers in a range of industries:

- electro-mechanical sector
- automotive industry
- household appliances

## Application Example

*Held by a plastic bushing, the screw can't get lost.*

*The locking jug is customizable to fit your application.*

## Benefits

- Simple handling and cost savings due to short assembly times
- Cost savings due to new production technology
- Self-locking function due to the special geometry
- No thread in the counter part required
- Multiple use possible
- Non-destructive disassembly
- Maintenance and control work can be carried out quickly and efficiently

✓ Reliable fastening.

✓ Easy disassembly.

✓ Reduces cost.
